

EDUCATIONAL READING AID

ABSTRACT

An apparatus having a generally triangular shape and for helping a person read includes a housing with oppositely spaced edge portions and oppositely spaced end portions integral with the edge portions. The housing further has substantially planar top and bottom surfaces with respective openings formed therein and a slot formed generally medially between the top and bottom surfaces of the housing. The apparatus further includes a plurality of colored films selectively positionable into the slot and for assisting a user to differentiate a group of words in a line from a remainder of words in other lines.
